DETAILED ACTION

Acknowledgments

The Examiner of record for this case has changed. It is hereby noted that all future correspondence for this case should be directed towards Examiner James Kramer.

Election/Restrictions

Examiner notes that it is unclear whether a proper restriction has been made to date in this case. As such, any restriction currently pending in this case is hereby withdrawn.

Pursuant to MPEP 811.03, Examiner believes that restriction is still proper. As such a formal restriction requirement follows.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2 and 10-18, drawn to Prepay Image Printing System, classified in class 705, subclass 26.
- II. Claims 3-5, drawn to medium to store images, classified in class 396, subclass 319.
- III. Claims 6-9, drawn to a Digital Camera for capturing images, classified in class 348, subclass 207.99.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as images stored on this medium are not required to be printed on Prepay Image Printing System of invention I. See MPEP § 806.05(d).

Art Unit: 3627

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as images captured with the digital camera on invention III are not required to be printed via the Prepay Image Printing System of invention I. See MPEP § 806.05(d).

Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as images captured by the digital camera of invention III are not required to be stored on the storage medium of invention II. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

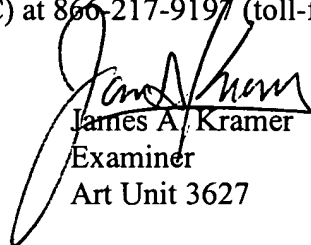

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
